

PMEX to Offer Meta Trader 5 Trading Platform

At Pakistan Mercantile Exchange (PMEX), we relentlessly strive to upgrade and expand the capacity of our trading platform. You would appreciate that the current trading platform has been developed in-house by PMEX and it has served our clients well since 2007. However, we understand that there are some state of the art systems available in the market today which offer additional features and can therefore be useful/desirable to our clients. Although, PMEX would continue to enhance and provide its current trading platform, it is also considering to make it possible for you to use the available technology to your benefit.

However, you would agree that it is not practical for PMEX to cater for all available platforms. Therefore, for the past few months, PMEX has been accessing multiple international trading platforms and has shortlisted MetaQuotes Software Corp's, Meta Trader 5 to be made available to you. A few of the salient features of the platform are attached with this letter for reference.

Please note that we have taken a two pronged strategy in this regard. On one hand we are in process of making the necessary arrangements for our clients to use the Meta Trader 5 through our gateway while on the other hand we have negotiated a very attractive deal for our members who are interested in this product. The rack rates and negotiated costs are mentioned below for your perusal:

MetaQuotes Rack Rate		Negotiated Rate for PMEX Members	
One Time License Cost	Monthly Technical Support Fee	One Time License Cost	Monthly Technical Support Fee
USD 75,000	USD 3,000	USD 5,000 [a 93% discount]	USD 750 [a 75% discount]

Considering the above, we are conducting a survey to access the need of adopting such a trading platform at PMEX as it has a significant cost associated for the Exchange. We will impart towards this initiative only if a reasonable number of our clients are interested in this product on the above mentioned cost. You are therefore requested to kindly convey your intention in this regard latest by Wednesday September 03, 2014 enabling us to do the needful at our end.

Having said the above, our current platform (NEXT) will be available to you either ways and we will continue to enrich and enhance it to meet your current and future needs.

We look forward to receive your feedback about the aforementioned technological advancement, which we feel will certainly increase your business manifold.

Best regards,

Ejaz Ali Shah
Managing Director

Encl: Features of Meta Trader 5
